

PATRICK B. LUCAS

Shelton, CT | 203-993-0960 | patrick.b.lucas@gmail.com | patrickblucas.github.io/Portfolio

PROFILE

Operations and Systems leader with 10+ years identifying broken processes and building the permanent infrastructure to fix them. Background spans multi-site inventory and procurement management, ERP evaluation and UAT, and full-stack tool development that removes manual error and single-person dependency from daily operations. Known across a 7-location division as the person other departments call when a system, a process, or a problem needs to actually get solved.

CORE COMPETENCIES

- Operations & Facilities Leadership: multi-site coordination, vendor and dispatch management, payroll administration, OSHA compliance, union/non-union team management
- Systems & Process Analysis: ERP evaluation and UAT (ERPLY, JD Edwards EnterpriseOne), business requirements gathering, defect documentation, process redesign
- Procurement & Inventory: demand forecasting, PO lifecycle management, landed cost analysis, multi-site materials flow, vendor relationship management
- Tool Development: React, Node.js, PostgreSQL, Google Apps Script; builds custom systems where off-the-shelf tools fall short

PROFESSIONAL EXPERIENCE

Senior Operations & Systems Manager | O&G Industries, Waterbury, CT **2019 – Present**

Connecticut's largest privately-held construction company, national Top 400 Contractor. Own daily operations for a facility supporting \$10M+ annual revenue, including dispatch, vendor management, receiving, and cross-functional systems work.

- Built a purpose-built ERP platform (React, Node.js, PostgreSQL) to eliminate a single-person tribal-knowledge dependency that was causing real financial exposure, including a lack of a system of record for custom items and costly drop-ship misrouting; built without being asked
- Rebuilt an entire procurement operation for 880+ SKUs into a self-built automation tool, cutting PO cycle time from 3-5 days to under 15 minutes; the speed change itself enabled a shift from one or two large annual buys to ordering every 2-3 weeks in season, reducing errors and stockouts
- Assigned by the Executive Vice President to lead operational evaluation of a division-wide ERP rollout (ERPLY); authored a 25-page implementation roadmap documenting 40+ system gaps and process recommendations, later designated system super-user
- Part of the initial two-location pilot for JD Edwards EnterpriseOne time and attendance before division-wide rollout; remain the only location conducting ongoing UAT, having identified and documented multiple system defects across two release cycles, working directly with the JDE Application Manager, Business Analyst, and Developer
- Serve as an informal, cross-location go-to resource across multiple systems and departments: resolved a stuck order issue for another location's Assistant Manager via remote support on a weekend with no help desk coverage, and repeatedly fielded account configuration requests from the Credit department that tenured sales and management staff believed were not possible
- Diagnosed recurring pallet inventory losses at ownership's direct request; identified five distinct, compounding root causes rather than a single one, and successfully pushed back on a proposed blanket fix that would have quadrupled the tracking burden without solving the underlying problem
- Built a counter sales tool that models real material variables (adjustable waste factors, paver coursing math, sand quantity calculations) rather than flat area math, replacing pen-and-paper estimation that regularly caused costly customer return trips and inventory errors
- Manage a \$2M inventory portfolio across a multi-site network; built an automated delivery routing tool (Google Maps API) covering 7 facilities and 150+ towns
- Proactively identify and resolve physical hazards before they cause incidents; maintained OSHA compliance with multiple years of zero lost-time incidents
- Led hiring, cross-training, and performance management for union and non-union personnel

Assistant Operations Manager | O&G Industries, Bridgeport, CT **2017 – 2019**

Promoted from Inventory Control Specialist. Managed daily warehouse operations at a high-volume regional consolidation facility distributing to 7 company locations.

- Diagnosed a warehouse layout built on retail-exposure logic rather than pick-efficiency logic; quantified the cost on a single SKU (13.4 miles of unnecessary annual forklift travel) and applied Pareto analysis to systematically reposition inventory by velocity
- Authored a 7-page cross-functional improvement proposal spanning warehouse optimization, demand forecasting, and process automation at the direct request of ownership; the resulting presentation led to promotion

Inventory Control Specialist | O&G Industries, Stamford, CT

2015 – 2017

- Managed inbound/outbound gate operations, verifying Bills of Lading and performing load verification; conducted full physical inventory counts to support system reconciliation
- Built a mobile assembly workstation from available materials after being handed the task with no equipment provided, increasing assembly throughput roughly 10x

EDUCATION & CERTIFICATIONS

- B.S. Business Management, Major: Operations & Project Management, Minor: Information Technology, Southern New Hampshire University, 2018, GPA 3.98
- Google Data Analytics Professional Certificate: Excel, SQL, R, Tableau (Coursera, 2023)
- SAP S/4HANA, Supply Chain & Operations Management (In Progress)
